

Fact Sheet

Super Efficient Energy Rating Label: Dishwashers

November 2015

Dishwashers are regulated for energy efficiency in Australia and New Zealand. If you manufacture, import, or supply dishwashers, it is important to understand your legal obligations.

Legislative framework for Energy Efficiency Labelling

Dishwashers are one of the oldest categories of products to be regulated for energy efficiency in Australia and New Zealand. Dishwashers have been required to carry an energy label since 1988, and a water efficiency label (the WELS label) since 1 July 2006. In October 2012, a single piece of Australian Government legislation, the *Greenhouse and Energy Minimum Standards (GEMS) Act 2012 (Act)*, replaced the various State and Territory laws that had previously been used to implement energy efficiency labelling. The new Act sets out participation requirements as well as a range of offences for non-compliance.

A key change from the previous State and Territory laws is the extension of coverage to include both the offer to supply and the commercial use of regulated products. If you purchase regulated dishwashers overseas and import them for your own commercial use they must still comply with the law, even though the supply¹ event occurred outside Australia.

¹ See section 14 of the Act for the full range of transaction types that are considered 'supply'.

Specific requirements for dishwashers

In Australia, regulatory requirements for dishwashers are set under the *Greenhouse and Energy Minimum Standards (Dishwashers) Determination 2015 (Determination)*. The Determination specifies what products **are** covered, and incorporates requirements for testing from the relevant Australian/New Zealand Standard by reference.

What products are covered

The dishwashers covered by the Determination are electric dishwashers that are ordinarily supplied and used for household or similar use. All products that fall within this definition are covered.

Please refer to subsection 5(1) and 5(2) of the Determination for full details of the specified characteristics for dishwashers.

Labelling requirements

The GEMS labelling requirements for dishwashers are those set out in section 2 and 5 of AS/NZS 2007.2:2005 with the following modifications:

- Part 1 of Schedule 2 of the Determination applies instead of sub clause 1.5.8 and clause 2.7;

- Part 3 of Schedule 2 of the Determination applies instead of the requirements in clause 5.1 of AS/NZS 2007.2:2005.

Where a star rating of 7 stars or more is derived from the star rating index, the labelling requirements are either:

- the requirements specified in sections 2, 5 and Appendix B of AS/NZS 2007.2:2005 as if the star rating were deemed to be 6 stars; or
- the requirements specified in Part 2 of Schedule 2 of this Determination (the Super-Efficiency Label).

From November 2015, manufacturers, importers and suppliers of dishwashers in Australia will be able to display a 10 star rating label on appliances that exceed the previous label that was limited to a six star rating.

See page 4 below for example labels.

Testing requirements

The testing requirements for dishwashers are specified in section 2 of AS/NZS 2007.2:2005, with modifications to the test requirements detailed in section 7(3) of the Determination.

Registration

In Australia, all regulated dishwashers must be registered before being offered for supply or used commercially.

A test report is required to be submitted as part of the registration process. To streamline compliance checks it is recommended that an electronic copy of the test report be uploaded when making a registration application.

More information on registering dishwashers is available at:

www.energyrating.gov.au/suppliers/registration

You can also obtain a copy of the Suppliers User Guide at:

www.energyrating.gov.au/document/user-guide-energy-rating-registration-suppliers-user-guide.

Monitoring and Enforcement

The E3 Compliance Program incorporates a range of compliance activities including the national check-testing program and retail surveillance. Check-testing aims to ensure the compliance of products with energy efficiency regulations. It also provides the community and other stakeholders with information that demonstrates that the overall efficiency goals of the program are being met and that those suppliers not meeting their responsibilities are identified and sanctioned. Regular check-testing is undertaken on a range of domestic and commercial product types. Results of previous check-testing and surveillance activity and information on the E3 compliance program are available at:

www.energyrating.gov.au/suppliers/compliance
