N/A = not applicable, HE = high efficiency level (where applicable – voluntary), **Red = different to standard rollover**. Terms “Voluntary” and “Mandatory” in the table refer to the star rating energy label. Term “Efficiency” refers to the measured efficiency under the specified standard. HWD is hot water delivery under AS1056.1 or AS/NZS4692.1. HSV is heat storage volume under AS1361 or AS/NZS4692.1.

+ In Australia, registrations will expire on the rollover date noted in the column entitled “Rollover Date” but will be extended (normally without charge) on an annual basis up to a maximum total registration period of 5 years or until such time as additional or amended regulatory requirements are introduced for this product group. New Zealand records do not expire but are grandfathered when a regulatory change occurs.
