

Hi,

I cannot attend one of these meetings but if possible would like to make comment here

If any possible plan to compulsory energy rate pool pumps, if spas come under this as well:

Pools and spas should NOT be considered to reside in the same basket.

Pools are primarily a body of water that you need equipment for to keep clean (very simplified)

A spa on the other hand needs to be clean, but the purpose of the pumps is performance - for proper jet pressure.

its impossible to energy rate a spa pump unless you are making flow rate vs amperage draw comparisons - that is the true measure of a spa pump energy efficiency.

The actual power consumption cannot be reduced in the same manner a pool pump can because you have to maintain flowrate to the jet for correct jet pressure.

Regards,

Adrian Lacy
